

Our Quality Is Clear

Choosing the Right Imaging Services

Getting an MRI is all about looking closely – and clear images count. A strong magnet and a skilled technologist produce clear, quality images that will help you reach a diagnosis.

The images above compare a lower strength machine to our 1.5T high-field machine.

- The 1.5T high-field machine we use is the gold standard for an MRI in a clinical setting.
- The open-bore machine has a larger opening than traditional machines, providing more comfort.
- Our technologists have expert training and hold the highest MRI certifications.

Outpatient MRI exams are performed between:

8 am - 5 pm | Monday - Friday

Texas Health Huguley Imaging Services is available for all types of MRI tests!
